

## **ADDENDUM 4**

### **Installation and operation of QUICKCLOSE Version 2.12 for the HP49G+**

#### **Introduction**

QUICKCLOSE software has been re-engineered as version 2.12 for installation on the HP49G series.

These notes document the differences in the installation procedure and operation of the program on the HP49G+.

#### **Keyboard layout**

The HP49G+ has a slightly different keyboard layout. The main difference to note is the re-location of the ENTER key, down to the bottom right hand corner. Because of the new location of the ENTER key, the SPC key is now no longer used as a "R/S" key in USER mode.

A useful aspect of this change is In CLOSE mode, distances can now be added on the command line using [SPC] and [+] or [-] before pressing [ENTER]

#### **Installation of Quickclose Expert Version 2.12 on the HP49G+**

The Conn4x software and USB driver included on the CD sold with the HP49G+ must first be installed on the PC. The USB cable supplied with the HP49G+ should then be connected to the PC and the HP49G+ (the port is located above the screen of the calculator).

1. Turn the calculator [ON]
2. Run the HP 48/49 Connectivity kit software (called Conn4x) on the PC
3. On the HP49G+, Press right-shift, release, then right-arrow  
(The message: *Xmodem Server Waiting for command* should be displayed)
4. Conn4x will establish a connection to the HP49G+ and display the file structure on the calculator.
5. Using Windows Explorer (or similar) drag and drop the two files EXP21.LIB and INSTE21 onto the HP49G+
6. Press [ON] on the HP49G+ and [VAR]
7. To Install the program on the HP49G+ follow the instructions from item 16 onwards on page 19 of the Expert Manual

Because the HP49G+ library is self-attaching, the installation program is not interrupted by having to turn the calculator off and then on again. Those steps are automatically skipped.

## **SERVICE SUPPORT**

### **For calculator, installation & downloading problems**

Refer to the dealer where you purchased the calculator or software.
