

***QUICKCLOSE* Version 3.1**

For HP50G and HP49G+ installations only

CORE Version 3.01 and PLUS Version 3.0 have been combined together with the most used elements of the version 2 ASTRO module for use on the HP50G and HP49G+ calculators. The only internal program modification between 3.01 and 3.1 is that the Misclose and Area are now printed after bearings and distances in the CLOSE module (PRINT B&D). The HP48Gii has insufficient memory for Version 3.1, so CORE 3.01 or PLUS 3 must continue to be used with the 48Gii.

Installing Version 3.1

To install Version 3.1 simply follow the instructions for CORE installation in the User Reference Guide (Section 2). 111kB free memory are required for installation.

Version 3.1 installation files are now in the folder ***hp50g49gplus***

GEOD and ROAD module

To GEOD and ROAD module functions are now in the second menu of the Main Menu.

ASTRO module

Refer to the ASTRO module documentation supplied separately, for instructions on how to use the Sun and star azimuth programs.
